 TOPIC TAGS: translation algorithm, machine translation, sentence coding  
 ABSTRACT: This is the second part of a paper describing an algorithm for Armenian-Russian machine translation developed at the Vychislitel'nyy Tsentr (Computer Center) AN Arm.SSR and YerGU. It describes the realization of the program of the algorithm on an automatic digital computer having a 2048-cell operative and 4096-cell outer memory. The basic principles of all the concepts utilized are due to O. S. Kulagina (Problemy kibernetiki, no. 2, 1959, 289-302). An outline of the algorithm's structure and the method of sentence coding is followed by a description of the scheme of the algorithm and of all the auxiliary information. A brief summary of the master and interpretation programs is also

TITLE: Synthesis of thiomide containing polymer analogs of polyacrylonitrile

SOURCE: Vyssokomolekulyarnyye soyedineniya, v. 6, no. 5, 1964, 769-770

TOPIC TAGS: polyacrylonitrile, polyacrylonitrile polymer analog, acrylonitrile diketone copolymer, polyacrylonitrile hydrogen sulfide reaction, polyacrylonitrile thiomide group, acrylonitrile diketone thioamide group

ABSTRACT: The synthesis of a new polymer analog has been achieved by the interaction of polyacrylonitrile with hydrogen sulfide according to the scheme

The formation of thioamides was confirmed by the presence in infrared spectra of

Card 1/3

ACCESSION NR: AP4037270

an absorption band at  $1624 \text{ cm}^{-1}$ . The thioamide is in a state of tautomeric equilibrium with the thiol form

The presence of thiol groups was confirmed by their reaction with an aqueous iodine solution. In another experiment, a 5% solution of acrylonitrile-diketone copolymer was acted upon with hydrogen sulfide. This resulted in the formation of a copolymer containing thioamide and sulphydryl group as shown by

Card 2/3

ACCESSION NR: AP4037270

It was found that at 50C about 50% of the nitrile groups are converted into thioamide or thiol groups in a period of 1 to 2 hours. The modified polyacrylonitrile and the acrylonitrile-diketone copolymers are soluble in acetone. Thanks are expressed to Yu. N. Shenker for the analysis of infrared spectra. Orig. art. has: 1 graph and 3 formulas.

SOURCE: Khimicheskiye volokna, no. 6, 1965, 13-16

TOPIC TAGS: synthetic fiber, acrylonitrile, copolymerization, chemical reaction, tensile strength, rupture strength, elongation

ABSTRACT: Fibers were formed by the wet method from solutions of acrylonitrile-diketene copolymers in dimethylformamide. Copolymers of 40,000-45,000 molecular weight and containing 4-6 mol % diketene on the weight of the copolymer gave most stable solutions from which fibers having 7-8% elongation were formed. Different types of reactive groups were introduced by treating the fibers with hydroxylamine or hexamethylenediamine (HMDA). Introduction of amine or hydroxylamine<sup>1</sup> groups enabled the fibers to be dyed with acid dyes<sup>1</sup>. Chemically dyed fibers were obtained by reacting the copolymer fibers with HMDA and dyes containing amino groups. Subsequent treatment of acrylonitrile-diketene copolymer fibers with HMDA significantly increased the zero-

AUTHOR: Gabriyelyan, M. S. (Sverdlovsk)

TITLE: Stabilization of unstable motion of mechanical systems

SOURCE: Prikladnaya matematika i mekhanika, v. 28, no. 3, 1964, 493-501

TOPIC TAGS: motion stabilization, unstable motion, mechanical system, controlling force, holonomic system, controllability, optimal stabilization, curvilinear coordinates, perturbed motion, functional minimization

ABSTRACT: The author studies a mechanical system whose states are described by curvilinear coordinates  $q_i(t)$  ( $t \geq 0$ ;  $i = 1, \dots, n$ ). The system is affected by a controlling force  $u$  related to the curvilinear coordinates  $q_i$  and the rates  $dq_i/dt$  by the controls

$$\frac{d}{dt} \frac{\partial T}{\partial \dot{q}_i} - \frac{\partial T}{\partial q_i} = Q_i(t, q_1, \dots, q_n, u) \quad (i = 1, \dots, n) \quad (1)$$

where  $T$  is the kinetic energy of the system,  $Q_i$  is the generalized force corresponding to the  $q_i$  coordinate. The motion  $q_i = q_i^0(t)$  is given, which follows from (1) for  $u = 0$  and certain initial conditions

Cord 1/3

ACCESSION NR: AP4040574

$$q_i^{\circ}(0) = q_{i0} = \text{const}, \quad (dq_i^{\circ}/dt)_{t=0} = q_{i0}^{(1)} = \text{const} \quad (2)$$

It is assumed that the motion  $q_1 = q_1^{\circ}(t)$  is unstable in the sense of Lyapunov. The problem is the determination of the force  $u$  which stabilizes the motion  $q_1^{\circ}(t)$ . The author sets up the equation of perturbed motion in a neighborhood of  $q_1^{\circ}(t)$ . If  $s_1 = q_1 - q_1^{\circ}(t)$ , then (1) takes the form

$$\frac{d}{dt} \frac{\partial T}{\partial \dot{s}_i} - \frac{\partial T}{\partial s_i} = S_i(t, s_1, \dots, s_n, u) \quad (i = 1, \dots, n) \quad (3)$$

which, for  $u = 0$ , have solution  $s_1 = 0$ . Two problems are considered. The first is to find a function

$$u = u(t, s_1, \dots, s_n, \dot{s}_1, \dots, \dot{s}_n) \quad (4)$$

so that the motion  $s_1 = 0$  will be asymptotically stable in the sense of Lyapunov on the strength of (3) and (4). The second problem is to find a function  $u$  such that the motion  $s_1(t) = 0$  will be asymptotically stable on the strength of (3), (4) and so that for  $s_1(t)$ ,  $u(t)$ , system (3), (4) will minimize the functional

Card 2/3

ACCESSION NR: AP4040574

$$I = \int_0^{\infty} G(t, s_1(t), \dots, s_n(t), s_1'(t), \dots, s_n'(t), u(t)) dt \quad (5)$$

The author derives sufficient conditions for controllability and stabilizability in one of the coordinates. He explains the conditions of observability of motion of the system in one coordinate or at one rate. He investigates the problem of optimal stabilization for an incomplete inverse relation. "The author is grateful to N. N. Krasovskiy for his valuable advice." Orig. art. has: 36 formulas.

TITLE: On the problem of stabilization of a mechanical system <sup>B</sup>

SOURCE: Prikladnaya matematika i mekhanika, v. 28, no. 5, 1964, 801-811

TOPIC TAGS: mechanical system stabilization, holonomic system, system control, regulator analytic construction dissipative force, gyroscope force, asymptotic stability

ABSTRACT: A study was made of the stabilization of a holonomic mechanical system by additional forces in the neighborhood of the state of equilibrium. The motion of the system is described by equations

$$\frac{d}{dt} \frac{\partial T}{\partial \dot{q}_i} - \frac{\partial T}{\partial q_i} = Q_i(t, q_1, \dots, q_n, u) \quad (i=1, \dots, n) \quad (1)$$

where  $q_i$  are curvilinear coordinates,  $T$  is the kinetic energy,  $Q_i$  are generalized forces, and  $u$  is the control action under consider-

Card 1/3

L 17667-65

ACCESSION NR: AP4046264

ation. Under the assumptions that (1) has a solution  $q_1 = 0$  at  $u \equiv 0$  and that its linear approximation is stationary and is of the form

$$\sum_{j=1}^n a_{ij} q_j' = \sum_{j=1}^n b_{ij} q_j + b_i u \quad (i=1, \dots, n) \quad (2)$$

where  $a_{ij}$ ,  $b_{ij}$ ,  $b_i$  are constants, the form  $\sum a_{ij} q_i q_j$  is positive definite and  $b_{ij} = b_{ji}$  (such a linear system is called conservative), the following problem of analytic construction of optimal regulators is formulated; to find a control function  $u$  depending only on the velocities  $q_1'$ ,  $q_2'$ , ...,  $q_n'$ , which minimizes a certain performance functional and assures the asymptotic stability of the motion  $q_1 = 0$ . Various cases are analyzed and conditions are established under which the solution of this problem is possible. The problem of the stabilization of motion by dissipative forces is analyzed and its connection with the problem of the analytic construction of optimal regulators is established. It is shown that conditions for stabilization by dissipative forces coincide with general conditions for control and stabilization of the system. The effects of dissipative

Card 2/3

L 17667-65

ACCESSION NR: AP4046264

and gyroscopic forces upon the controllability, observability, and stability of conservative mechanical systems in the neighborhood of the state of equilibrium are studied. It is shown that by proper selection of dissipative and gyroscopic forces the quality of controllability, observability, and stability can be improved in many cases. Orig. art. has: 49 formulas.

TITLE: Effect of dissipative and gyroscopic forces on the controllability and observability of mechanical systems

SOURCE: Prikladnaya matematika i mekhanika, v. 30, no. 2, 1966, 226-235

TOPIC TAGS: mechanics, gyroscope motion equation, friction, ordinary differential equation, ~~control theory~~ MOTION MECHANICS

ABSTRACT: The effect of dissipative and gyroscopic forces on the controllability of a conservative mechanical system is analyzed. For the holonomic conservative mechanical system, controlled by a single action  $u$ , the linear equation

$$\dot{y}_i = \lambda_i y_i + \alpha_i u \quad (i = 1, \dots, n)$$

is given. Under the conditions where the above system is not fully controllable, two theorems are proved to show the necessary and sufficient conditions for the existence of a dissipative force that will make the above system fully controllable: Theorem 1: If among the numbers  $\lambda_i$  at least two are equal to zero, or, in one system of the above equation,  $\lambda_i = \alpha_i = 0$ , then the system cannot be fully controlled under the

Card 1/2

L 30380 40

ACC NR: AP6012541

action  $u$ , even in the presence of dissipative or gyroscopic forces. Theorem 2: To make a not-fully controllable system fully controllable under a dissipative force, it is sufficient that

$$\lambda_i \neq \lambda_j, \quad \alpha_i \neq 0 \quad (i, j = 1, \dots, k, i \neq j)$$

$$\lambda_i \neq 0 \quad (i = 1, \dots, k-1, k+1, \dots, n).$$

The controllability is shown to improve if a gyroscopic force is added to the above system, defined by

$$y_i'' = \lambda_i y_i + \alpha_i u \quad (i = 1, \dots, k), \quad y_i'' = \lambda_i y_i \quad (i = k+1, \dots, n).$$

TITLE: Stabilization of a mechanical system having a single cyclic coordinate

SOURCE: AN ArmSSR. Izvestiya. Seriya fiziko-matematicheskikh nauk, v. 18, no. 6, 1965, 35-41

TOPIC TAGS: motion stability, coordinate, motion equation, asymptotic solution

ABSTRACT: The author considers the control signal that must be applied to stabilize a motion of a holonomic mechanical system with a single cyclic coordinate, when the control signal is a scalar quantity. The equation of the system is described by the generalized equation

$$\frac{d}{dt} \frac{\partial T}{\partial \dot{q}_i} - \frac{\partial T}{\partial q_i} = Q_i(q_1, \dots, q_n, u, t) \quad (i = 1, \dots, n).$$

having a solution  $q_1 = 0$  when  $u = 0$ , where  $u$  is the external control signal. If  $q_1$  is the cyclic coordinate, it is assumed that the linear approximation of the equation is stationary and is of the form

Card 1/2

L 37098-55

ACC NR: AP6018785

$$\sum_{j=1}^n a_{lj} \dot{q}_j = b_l u, \quad \sum_{j=1}^n a_{lj} \dot{q}_j = \sum_{j=2}^n b_{lj} q_j + b_l u \quad (l = 2, \dots, n).$$

The problem consists of finding a function

$$u = \sum_{i=1}^n p_{n-1} q_i + \sum_{i=1}^n p_{21} \dot{q}_i$$

such that the motion  $q_1 = 0$  is asymptotically stable. Conditions for the solution of this problem are found. Several theorems concerning the solvability of the initial problem and observability of stationary solution are proved. Orig. art. has: 25 formulas.

TOPIC TAGS: research reactor, nuclear reactor technology, construction material,  
technical assistance

ABSTRACT: The building of the research reactor TRIGA Mark II at Podgorica, 9 km north-east of Ljubljana, is discussed. The reactor, designed and produced by the General Dynamics Corporation was financed by the US Government and built jointly with several Yugoslav subcontractors. Following a brief description of the reactor, the search for a convenient location, the preparatory operations, and the establishment of the financing program, the article discusses at length the numerous problems encountered by the Yugoslav subcontractors during their work in this new field under conditions of strict financial and production controls imposed by the main US contractor. Separate sections deal with contract arrangements, new organizational experiences, parts produced in Yugoslavia, the mounting of the reactor, the building of the bio-

TITLE:

A Transformer for Burning Through a Cable at the Point of Damage When the Puncture is Self-closing (Transformator dlya prozhiganiya mesta povrezhdeniya kabelya pri zaplyvayushchem proboye)

PERIODICAL:

Energetik, 1958, Nr 9, pp 28-30 (USSR)

ABSTRACT:

A portable power transformer of 20 to 50 kva for burning through both high and low tension cables is needed in most grid regions. Engineer A.A. Krylov worked out a system with a TM 50/6 power transformer which is, however, cumbersome and lacks a range of selectable voltages. Technician D.N. Ostapenko worked out a new system based on a single-phase transformer which has 32 alternative high tension voltages from 0.6 to 9 kv and current from 24-3 amp. Primary voltage is 380 or 220 v. The input is 20 to 25 kva. The author describes the system used in his grid region, based on Ostapenko's scheme. A TM 50/6 transformer was used, two phases of the winding removed, part of the yoke dismantled and the oil-cooling tank replaced by a casing without oil but with air vents. By these changes, the weight of the

ACCESSION NR: AR4028480

tion method. The stabilizer circuit employs a parallel-connected regulating tube, which is a GMI-83 pulsed tetrode. The three-stage dc amplifier with a gain of 10000 uses three tubes in a differential circuit. This ensures a null drift  $\leq 1$  mV. The output voltage is maintained stable within  $5 \times 10^{-5}$  in 8 hours of continuous operation. The transient time in pulse measurements of the load current does not exceed  $3 \times 10^{-3}$  sec. R. N.

TITLE: Composition of glue for low-inertia electrolytic atmospheric humidity sensors

SOURCE: Leningrad. Glavnaya geofizicheskaya observatoriya. Trudy\*, no. 156, 1964. Voprosy\* fiziki oblakov i aktivny\*kh vozdeystviy (Problems of the physics of clouds and active particles), 123-130

TOPIC TAGS: meteorology, meteorological instrument, humidity, sensing element, atmospheric humidity, glue, moisture sensitive film

ABSTRACT: The article presents a listing of the ingredients to be used in the preparation of a moisture-sensitive film for use with electrolytic air humidity sensors. The films used in the past have been soluble in water and subject to deformation; this has been remedied by the use of a binder which is insoluble in water. Since tars, celluloid, and other water-insoluble substances were found unsuitable, the author proposes that such a binder be prepared using the following: gelatin (0.56 g), ammonium dichromate (0.4 g), lithium chloride (saturated solution at 20C) (2 ml), ethyl alcohol (100 ml) and water (120 ml). The film formed from this mixture, after ultraviolet irradiation, becomes insoluble in water and yet retains a sufficiently high vapor permeability. This made possible a significant increase in

Card 1/4

ACCESSION NR: AT4045160

the resistance of low-inertia electrolytic sensors to high air humidity, their stability and lifetime. The base of the sensor itself is made of a plastic whose surface prior to application of the film is polished and degreased carefully. The sensor is irradiated with UV light for 5 minutes after application of the moisture-sensitive layer. Fig. 1a of the Enclosure shows that the inertia of such a sensor, when measuring high humidity, is an extremely insignificant value (0.3-0.5 seconds), Fig. 1b of the Enclosure shows the characteristic curve of this same sensor after a 30-minute exposure in saturated water vapor. Comparison of the curves shows that the exposure of the sensor under conditions ruinous for ordinary electrolytic sensors has relatively little effect on the sensitivity and inertia of this electrolytic sensor. TITLE: Small-size atomic electric power installation TES-3

SOURCE: Atomnaya energiya, v. 17, no. 6, 1964, 448-452

TOPIC TAGS: small atomic power installation, portable atomic power installation, nuclear reactor, electric power generation/TES-3 reactor

ABSTRACT: The paper is a summary of the SSSR report #310 at the Third International Conference on Peaceful Uses of Atomic Energy in Geneva, 1964. It describes a movable small-size atomic electric power installation with the water cooled and moderated TES-3 reactor (under 10,000 kw). It consists of four

Card 1/2

L 24211:85

ACCESSION NR: AP5001266

blocks each of which was assembled at the manufacturing plant, and which are placed on four self-propelled flatcars on caterpillar tracks. No housing is required for the installation; the only local preparation needed is the radiation protection. The results with a demonstration model show a satisfactory agreement between the theoretically expected and actually obtained parameters of the installation. Orig. art. has: 4 figures

2942. <sup>Gabryel, P.</sup> GRONIEWSKI J., GABRYEL P. and GREMBOWICZ L. Zakł. Anat. Patol. A. M., Poznań. \* Badania zespołu błon szklistych płuc noworodka. I. Badania morfologiczne. Investigations on the hyaline membrane syndrome in newborns. I. Morphological study PATOL. POL. 1957, 8/1 (13-22) Tables 1 illus. 7

Among 250 non-selected postmortem studies on newborns, the syndrome of hyaline membranes was observed 52 times. The authors include in this syndrome: atelectasis, extensive hyperaemia and the existence of hyaline membranes. Conclusions: (1) Hyaline membranes form on the place where they are found; they do not come from aspirated amniotic fluids. The material of which the membranes are formed originates from

29.11

the capillaries, which present pathological permeability. (2) The process of development of the membranes is as follows: (a) initial period - formation of the membranes, (b) complete development of the syndrome, and (c) final period - elimination of the membranes. During the final period, the hyaline membranes are detached from the underlying tissue and divide into fragments. The detachment of the membranes is accompanied by an inflammatory process. These different periods are not strictly demarcated; fairly often all the stages of development of the hyaline membranes are observed in the same fragment. Death may occur during each of these periods, even during the initial period. Attention is drawn to the correlation between the syndrome of hyaline membranes and pulmonary inflammations. During the period of complete development of the syndrome of hyaline membranes, the changes observed in the walls of the respiratory tract have the character of interstitial pneumonia. During the final period, alveolar pneumonia develops if death has not occurred earlier. Consequently, it may be concluded that the hyaline membrane syndrome has to be understood on the basis of the mechanism of inflammation.

601. INVESTIGATIONS ON THE HYALINE MEMBRANE SYNDROME IN NEWBORNS. II. MICROFLUOROSCOPIC STUDY - Badania zespołu błon szklistych płuc noworodka. II. Badania zespołu błon szklistych w mikroskopii fluorescencyjnej - Groniowski J., Gabryel P. and Grembowski Ł. Zakł. Anat. Patol. A.M., Poznań - PATOL. POL. 1957, 8/1 (23-30) Tables 1 Illus. 3

Forty-seven cases were examined. The hyaline membranes, as well as the connective tissue, have their own fluorescence: a very weak yellow-blue. The membranes are readily stained by the acridine containing dye 1, acridine O and thiazoles. In the researches on the morphology of hyaline membranes and neighbouring tissues, a whole series of combined staining methods was applied. These included 2 personal methods which were much simpler and quicker than those employed so far. The microfluoroscopical examination fully confirmed all results previously obtained. This method deserves greater attention than those used at present.
